

Google Play Annual Transparency Report

Developers are critical to our ecosystem, constantly innovating to attract, engage, and re-engage their users. They create the apps that billions of people use every day, from games and social media to productivity tools, personal finance, and healthcare apps. Google Play provides millions of apps and games. Google Play has always strived to be a full lifecycle partner to our developers by providing tools and programs that help them build and grow their businesses. We take our role as a partner seriously and ensure that we are innovating and providing services and capabilities that enable our developers to focus on what they are best positioned to do: create great apps and content. The 2024 data contained in this transparency report is intended to convey meaningful information about how people interact with Google Play on a global scale.

Google Play

190+ Markets

Google Play is available in 190+ markets

2.5 Billion

There are 2.5B+ active users on Google Play each month

150 Billion

There were more than 150 billion installs from Google Play in 2024

Average monthly number of customer accounts searching the Play Store	1,924,817,991
Average monthly number of apps with at least 1,000 search impressions	847,457
Total number of apps with at least 1,000 search impressions	1,639,001
Average monthly app re-downloads	10,738,448,811
Average monthly automatic app updates	177,925,836,773
Average monthly manual app updates	11,502,465,237

Keeping the Ecosystem SAFE

Google Play treats the trust and safety of our users as a foundational responsibility. We operate by and invest in the SAFE Principles to help the 2.5B+ people who use our platform each month feel secure and to protect and sustainably grow the 3M+ developers who build their businesses on Play. Our teams proactively identify violations of our rigorous trust and safety standards and effectively respond to user and regulatory expectations.

We know that our commitment to providing a consistent and transparent environment is essential for our users to have the confidence that leads to healthy commerce on our platform.

- **Safeguard our Users:** Google Play wants everyone to feel secure in engaging with high quality apps on the platform. We do this with a combination of automated reviews and by having a team of experts who review apps before they are published, and by removing apps that violate our policies. We build products and processes to improve app quality, weed out bad apps, and stay ahead of emerging challenges that may cause harm.
- **Advocate for Developer Protection:** Google Play wants to enable a healthy business environment for developers. We do this by acting as the first line of defense for app businesses, providing tools and resources for developers to protect users, such as the Play Integrity API and building platform protections to enable developers to focus on growth. We work closely with our developer community to facilitate adoption of these tools and resources and to optimize our support.
- **Foster Responsible Innovation:** Google Play wants to support emerging trends in a safe and thoughtful way to unlock long-term value. We do this by working with developers to create new features and products, by supporting research into new technologies, and by identifying and addressing potential risks.
- **Enhance Platform Defenses:** Google Play regularly evolves our policies and safeguards to stay ahead of malicious actors and improve trust. We do this by listening to feedback from users and developers, and by working with experts to identify and protect the ecosystem against new threats.

Trust and Safety

Our policies create guardrails that reflect our ongoing commitment to providing a safe and secure experience for our developers and our users.

Number of apps removed from Google Play due to violation of terms and conditions¹

3,909,324

Type of violation of terms and conditions (Top 10 categories)	Number of apps removed globally
Data protection and privacy violations	2,151,553
Outside scope of platform service ²	644,888
Data defect	590,938
Scams and/or fraud	335,469
Protection of minors	85,476
Healthcare and medicine	37,858
Spam	14,855
Negative effects on civic discourse	12,495
Unsafe and/or illegal products	7,790
Pornography / sexualized content	7,651

Developers and Apps

Number of terminated developer accounts	154,881
Number of app submissions reviewed	19,292,647

¹ Note that apps removed from the Play Store subject to government takedown requests are described in the [Government requests to remove content](#) transparency report.

² Outside scope of platform services refers to content, goods, and services that are ineligible for distribution through the Play Store.

Number of app submissions rejected	1,955,305
Number of app submissions approved after rejection ³	827,995

Fairness

We handle developer complaints about enforcement actions through a fair and transparent review process.

Number of complaints ⁴ received from developers related to apps removed from Google Play due to policy violations	285,980
--	----------------

Number of complaints received from developers related to apps removed from Google Play due to policy violations, broken down by outcome of complaint:	
Initial Decision Reversed	15,625
Initial Decision Upheld	172,903
Decision Omitted ⁵	90,361
Median time needed to action a complaint ⁶	< 1 day
Number of terminated developer account restorations	1,559

³ Developers can address the issues resulting in the app rejection and resubmit without an appeal. Please see [Play Console Help](#) for more details on the enforcement process.

⁴ Complaints (i.e. appeals) from developers are received through dedicated complaint-handling systems.

⁵ When a complaint is withdrawn, if the complaint requires no action, response or decision from Google, or if the creator resolves the issue so that their content is no longer policy-violating, this is categorized as 'decision omitted'.

⁶ Google Play works to provide complaint outcomes to developers within a reasonable timeframe. The types of complaints vary widely, with some requiring a longer review period due to varying degrees of complexity or external factors (e.g., legally prescribed wait times). This metric reflects the median time, in days, needed to action a complaint. Appeals may be resolved beyond the period in which they were initiated.

Security and Privacy

We build tech and tools that give developers the ability to build high quality apps centered around safety, which empowers and gives control to users.

Google Play Protect scans more than 200 billion Android apps a day. In 2024, Google Play Protect's enhanced fraud protection pilots have shielded 10 million devices from over 36 million risky installation attempts, encompassing over 200,000 unique apps.⁷

Apps using Play integrity features are seeing 80% lower usage from unverified and untrusted sources on average.⁸

Resources

We provide a wide variety of resources, including the ones listed below, to help developers and consumers understand our policies and build safer apps.

Play Academy	
Play Academy: Prepare	Training on how to test apps with users to get feedback, design a store listing, and follow the best practices to plan for a smooth and successful launch of an app or game.
Play Academy: Launch	Training on best practices for publishing and releasing an app or game on Google Play.
Play Academy: Design	Training on how to create safe and secure experiences while staying compliant with Google Play policies, and how to design for engagement.
Play Academy: Grow	Training on how to find the right audience, improve store listing, and get more users.
Play Academy: Engage	Training on best practices for sustainably keeping users engaged and the top reasons for uninstalls. Also learn how to improve negative reviews and analyze apps' technical performance.
Play Academy: Earn	Training on monetisation options available on Google Play and how to use them to maximize app revenue. These trainings are

free to developers, and allow them to create higher quality apps and to better monetize them.

Additional Tools for Business Growth

[Go Global](#)

Go Global helps developers grow in local markets by providing insights into specific regions and best practices that relate to those regions.

[Think with Google](#)

Developers can use Google's interactive research tool for (i) guidance on how to understand consumer behavior, (ii) tips for marketing, (iii) developer tools to grow app audience by understanding the demographics of the app users, and (iv) developer statistics on the interests of users in a specific region or country, among other things.

[Guidance for getting apps discovered on Google Play](#)

Google provides tips for getting apps discovered on Google Play including: (i) how to build a store listing, (ii) how to make an app stand out through graphics, and (iii) how to diversify the audience. Information is also provided on how apps can be more discoverable and how apps are ranked in search results.

[Subscriber Winback](#)

Google Play offers developers guidance on and tools to run win-back offers to regain lapsed subscribers.

[Google Play Developer Help Community](#)

A forum for Google Play developers to find answers to policy questions, share knowledge, and connect with fellow developers.

Protecting Business and Users

[Anti-fraud guidance](#)

Anti-fraud guidance from Google provides developers recommendations on how to help prevent attacks to and abuse of their apps.

[Google Play Protect](#)

Google Play Protect scans over 200 billion apps per day for malware, data breaches, and fraud.

[Google Play SDK Index](#)

Google Play SDK Index provides insights and usage data for popular commercial SDKs on Google Play so developers can make informed decisions about whether an SDK is right for their business and their users.

[Play Integrity](#)

Google Play's integrity and signing services help developers to ensure that users experience their apps and games in the way they intend.

[Pre-Review Checks](#)

Pre-review checks in Play Developer Console to help developers catch policy and compatibility issues before launch.

Play Console

[Play Console Help Center](#)

Find tips and tutorials on using Google Play Console and other answers to frequently asked questions.

[Policy Center](#)

Details of the latest changes to our policies, including when these changes take effect and resources to help developers prepare for app updates.

Latest News

[Android Developers Blog](#)

The latest Android and Google Play news for app and game developers.

[PolicyByte videos](#)

Watch important announcements about Google Play policy updates.

[Policy webinars](#)

Google Play offers several webinars with live FAQs for multiple regions throughout the year.
